HiPath 500

The professional communications system with extensive services and built-in mobility for small office and retail businesses.

HiPath 500 Go!
The complete package for greater mobility.
For a short time only as an especially attractive complete package with expanded mobility functions. Ask us about all the advantages and our special offer price.

Unbelievable!

HiPath 500 –
Big performance for small companies.

Reliable voice communication with high-quality end devices and great ease of use – that is HiPath 500. The telephone system developed especially for companies with up to ten employees is based on secure ISDN technology and meets even the highest demands through a variety of integrated solutions. Whether small companies, legal or medical practices – wherever communication is essential for day-to-day business, the system offers professional support with features that are usually found only in larger systems.

Grandiose

HiPath 500 offers more than you have ever expected from a telephone system for small companies – as standard.

HiPath Cordless Office

The integrated mobility solution: HiPath Cordless Office offers cordless telephony for better accessibility – to save you time and make it easier to do business. Interruption-free connections using multiple DECT base stations via roaming and handover. Up to 3 base stations and thus up to 16 Gigaset mobile phones can be connected. Depending on the layout of your floor or building, you can thus cover an area of up to 10,000 sq m.

Integrated Voice Mail

The integrated voice mail feature offers every HiPath 500 user an individual recording option – with 24 personal mailboxes and two individual announcements for each user as well as two hours of recording time. Incoming messages are shown in the display of the system telephones or are signaled optically via LED if the function key is set up for that purpose. The module can also be configured for announcement services and as an automatic attendant function (Auto Attendant).

XPhone Entry

A standard application for the basic functions of computer telephony integration (CTI). The perfect solution for workplaces that use CTI as a universal communications and contact data maintenance tool. Optionally, the expanded XPhone Standard function can be activated.

Additional Features:

- **Attendant:**
Taking calls when employees are not accessible, or after office hours.
- **Executive/Secretary Function:**
Fast, easy-to-use communication between an executive and the secretarial staff through LED signaling for the line and direct station selection keys.
- **Team Function:**
Efficient communication in a project group through fast allocation of callers to available contacts.

The Perfect Addition

HiPath 500 provides access to the public network via ISDN network carriers. Digital system telephones (UPO/E) can be operated together with conventional analogue phones, fax, and entrance phones. Via DECT base stations, it is possible to provide area coverage for wireless communication with Gigaset mobile phones.

OpenStage 40 T

The office telephone for PC workstations with headset connection, for high call volumes, with six freely programmable function keys and display labeling.

Also available:

- **OpenStage 20 T:**
The entry level model with three route navigator and seven fixed function keys.
- **OpenStage 60 T:**
The model for the secretarial office with large graphical color display.
- **OpenStage 80 T:**
